

Services relating to the 5 safety rules

# Ensuring everyday safety

Buying products to comply with safety rules is only the first step. By law and by standard, you must test the "5-safety-rule" products (e.g. voltage detectors) regularly, or have them tested, at least every six years. DEHN offers a practical all-round service for this.

## Your benefits at a glance:

**Safe.** You implement safety through regular testing, cleaning and documentation of operating and auxiliary equipment.

**Preventive.** You protect employees from electrical accidents.

**Individual.** You receive services tailored to you.

**Legally compliant.** You meet your obligation to provide evidence as an employer in accordance with the German Occupational Health and Safety Act by means of test reports and documented services.

# Increasing safety on electrical installations

## Check voltage detectors regularly

Have your voltage detectors tested to IEC 61243-1 at DEHN's own service centre.

## Technical testing of earthing and short-circuiting devices with the LoRe measuring device

Use the measuring procedure to assess the overall condition of your device – not only visually but also technically.

# Organise safety by having operating and working equipment in good condition

The use of certified and serviced operating and work equipment reduces the probability of an arc fault occurring. In addition to the correct selection of equipment, its functioning must be checked at fixed intervals. Regular cleaning can also prevent the formation of an electric arc.

How do you organise the regular inspection of your protective and auxiliary equipment?
